

Polymer recycling – Plastic Fresk

Philippe Reutenaer, Fresque du plastique

The Plastic Fresk is a collaborative workshop that brings its participants to take a look at the entire life cycle of plastics. It invites us to ask ourselves how we position ourselves individually or collectively, and what are our means and opportunities to improve the impact of our use of plastic on the environment.

The workshop uses the **pedagogical style of the Climate Fresk** to raise awareness, call for action, or identify opportunities and means of action. It is based on the points of view of the participants, leads them to debate among themselves and invites them to go further in their understanding and their search for solutions both individually and collectively, at home or at work. It is an experience that **creates an active bond between the participants**.

The **Plastic Fresk** is based on scientific work as much as on **industrial realities**. It is a space for the debate of ideas which aims to create and deploy solutions.

Concepts covered :

- Produce plastic and plastic objects
- Environmental impact of plastics
- Sorting towards the end of life
- Recycling challenges
- Institutional solutions
